PROFILE

I am a researcher and communicator working on artificial intelligence, media and political communication. My research began in Ghana and Africa and speaks to questions that matter in the United States and around the world, especially how societies govern new technology and how political power speaks through media. I have worked as a broadcast journalist and in government communication, served in student leadership at Texas Tech University and spoken on the responsible use of artificial intelligence in graduate education at the United Nations Economic and Social Council. My training in history and law shapes how I read evidence and write.

AREAS OF EXPERTISE

Artificial intelligence and media · Technology governance · Political communication · Research and writing · Student and public leadership · Media law and ethics
